polymerase, ligase Given a strand of DNA and the DIRECTION replication occurs, determine which strand is the leading strand and which is the lagging strand.

Study Guide: DNA Replication | Biology I

DNA copies itself through the process of

Acces PDF 123 Dna Replication Study Guide Answers

replication: The two strands of the double helix unzip, forming replication forks. New bases are added, following the rules of base pairing (A with T and G with C). Each new DNA molecule has one original strand and one new strand. DNA polymerase is an enzyme that joins individual nucleotides to produce a new strand of DNA. During replication, DNA

DNA REPLICATION: Before the lagging-strand DNA exits the replication factory, its RNA primers must be removed and the Okazaki fragments must be joined together to create a continuous DNA strand. The first step is the removal of the RNA primer. RNase H, which recognizes RNA-DNA hybrid helices, degrad...
