Pathogenic Fungi in Humans and Animals

Pathogenic Fungi. Many fungi have negative impacts on other species, including humans and the organisms they depend on for food. Fungi may be parasites, pathogens, and, in a very few cases, predators. Plant Parasites and Pathogens. The production of enough good-quality crops is essential to our existence.

Fungi | OpenStax: Concepts of Biology

Fungal chemodiversity is well known in part due to the production of diverse analogous compounds by a single biosynthetic gene cluster (BGC). Usually, similar or the same metabolites are produced by closely related fungal species under a given condition, the foundation of fungal chemotaxonomy. Here, we report a rare case of the production of the cyclodepsipeptide beauveriolides (BVDs) in three ...
