### Fans and Turbines! - Homemade fans | Solar powered fans | Mini Wind-Turbines (Compilation)

The difference of the turbine is easy, it does the opposite of what the other two do. A turbine extracts energy from a moving fluid, while the other two add energy to it.Another way of saying this is that a turbine de-pressurizes the fluid while t...

On their large civil turbofans, Rolls-Royce split the compression system into three: a fan, an intermediate-pressure (IP) compressor and an HP compressor, each unit being driven by its own turbine unit. The RB199 military turbofan also has this arrangement.

### What is the difference between a turbine and a compressor ...

The fan (and booster stages) are driven by the low-pressure turbine, whereas the high-pressure compressor is powered by the high-pressure turbine. A high-specific-thrust/low-bypass-ratio turbofan normally has a multi-stage fan, developing a relatively high pressure ratio and, thus, yielding a high (mixed or cold) exhaust velocity.

### Turbofan - Wikipedia

Air is compressed by the fan blades as it enters the engine, and it is mixed and burned with fuel in the combustion section. The hot exhaust gases provide forward thrust and turn the turbines which drive the compressor fan blades. 1. Intake 2.

### Components of jet engines - Wikipedia

\$\begin{group} I'm confused; there is no such thing as a "turbine fan". A "fan" is an apparatus with rotating blades that creates a current of air. That's not what turbines do. A turbine converts fluid (water, air, steam, etc.) into rotational movement or power. They are opposites. Someone had to say it. Pedantic \$\endgroup\$ – Tim Nevins Jun ...

The compressor is basically a cone-shaped cylinder with small fan blades attached in rows (eight rows of blades are represented here). Assuming the light blue represents air at normal air pressure, then as the air is forced through the compression stage its pressure rises significantly.
